# AQA A-Level Design & Technology: Product Design [7552]

### **Curriculum Intent**

It is our intent in A-Level Design & Technology: Product Design, to offer our students the chance to use creative thinking, problem solving and design and making skills, within a defined purpose to produce tangible outcomes. Through a variety of creative and practical activities, pupils are taught the knowledge, understanding and skills needed to engage in a process of designing and making, and comprehend the creative and manufactured world around them. They work in a range of contexts through our wide range of subject topics, to design, make and evaluate a variety of different practical outcome based projects.

A-Level Design and Technology: Product Design will prepare students to participate confidently and successfully in an increasingly technological world. Students will gain awareness and learn from wider influences on Design and Technology including historical, social, cultural, environmental and economic factors. Students will get the opportunity to work creatively when designing and making, and apply technical and practical expertise.

Through the study of Product Design, students acquire a broad range of subject knowledge and draw on and enhance their application of disciplines such as mathematics, science, engineering, computing, ethics and art. Students learn how to, and are encouraged to take risks, becoming resourceful, innovative, enterprising and capable citizens. Through the evaluation of past and present design and technology, students will develop a critical understanding of its impact on daily life and the wider world. Design & Technology students will learn about the wider impact of global issues such as Sustainability and modern manufacturing techniques as well as the development of modern materials and manufacturing processes, this will ensure that our students are equipped and empowered with the skills and knowledge that they need to make a positive difference to our society and become well rounded knowledgeable citizens. High-quality design and technology education, makes an essential contribution to the creativity, culture, wealth and well-being of the nation.

This A-Level allows students to study core technical and designing and making principles, including a broad range of design processes, materials techniques and equipment. Students will also undertake a major coursework design project where they will investigate a live client's needs, then design and make a product that solves their client's problem.

Year	Curriculum	Term & Wee Commen	ek cing	Theory content	NEA Coursework / Focused Practical Task	
	2.2	Dra cou		Decign theory (Part 1)	Assignment 1	
	5.2 Designing &	preparatio	n task	Design theory (Part 1)	Assignment 1.	
	Designing & Making Principles	Pre-course preparation task		Students wanting to study Product Design should have a natural interest in this topic and a desire to learn and be inspired by the work of designers. They should be interested in design styles and movements and be intrigued by design influences. The task set surrounding this section of the course, enables students to really show us what they're made of, in terms of their ability to research and communicate through language, ICT and drawing. We are able to determine the effort and capability of our students at the very start of the course and put in effective intervention from the off. Students will need to apply their knowledge and understanding of this topic in their Designing & Making Principles examination. Students will build upon their existing knowledge of this topic, from their studies in Year 8 and Year 10	<ul> <li>Assignment 2: Design styles and movements</li> <li>3.2.2 Design theory</li> <li>Design influences</li> <li>Design styles and movements</li> <li>Designers and their work</li> </ul>

				curriculum is designed to enable		
				students to quickly start to engage		
				solve as a team, just as a group of		

			designers would in industry. They must work together and then present their proposal to the rest of the class. This encourages all students to play an active role in the task and helps them overcome any inhibitions, preparing them to be able to confidently discuss design proposals later in the course. Students will be familiar with generating design ideas, as they have experience of doing this throughout KS3 and KS4. However, they will not have had experience of executing this task in a group situation nor to such a high level, this will prepare students for later sections such as the NEA.

				6R's of sustainability from their	experiences.
				studies at KS3 and KS4. However,	
				they must now develop their ability	
				to be considerate designers, not	
				only in terms of the environment	
				also need to understand the	
				importance of designing products	
				for commercial production, to	
				ensure they are modifying their	

				designs to make them more efficient to manufacture and reduce the number of manufacturing processes. This knowledge will be examined in their Technical principles examination and will equip them with the knowledge necessary to design successful products during their NEA, which will commence at the beginning of Spring Term 3.	
12	3.1 Technical principles	Autumn 1	Wk 7	Disassembly 3.1.11 Design for manufacturing, maintenance, repair and disposal Manufacture, repair, maintenance and disposal - Disassembly In order to develop knowledgeable and considerate designers, students must understand the importance of disassembling products for repair or when it reaches the end of its useful life. This also enables students to examine in 'real life' how products have been made looking at a wide range of skills. This knowledge will be examined in their Technical principles examination and will equip them with the knowledge necessary to design successful, well considered, products during their NEA, which will commence at the beginning of Spring Term 3.	Box of skills: Dye sublimate/laser cut base and assemble. 3.1.7 Digital design and manufacture - Computer aided design (CAD) Computer aided manufacture (CAM) Focused practical task: Product disassembly 3.1.11 Design for manufacturing, maintenance, repair and disposal Manufacture, repair, maintenance and disposal - Disassembly Students disassemble an existing product, photographing key features to include in their write up of the activity.
12	3.2	Autumn 2	Wk 8	Design methods and processes:	Box of skills: Bending lid,
	Designing & Making Principles			<ul> <li>Iterative design process</li> <li>User-centered design</li> <li>Investigative methods</li> <li>The development of a design proposal</li> <li>The planning, manufacture and evaluation of a prototype</li> <li>3.2.1 Design methods and processes</li> <li>Students need to be aware of and be able to explain, different approaches to user centred design. They must understand that in approaching a design challenge there is not a single process, but that good design always addresses a</li> </ul>	fitting lid, drilling lid. 3.1.2 Performance characteristics of materials - Performance characteristics of metals 3.1.4 Forming, redistribution and addition processes - Metal processes Students will be compiling an ongoing "journal of skills" record that they will recall and record the processes, materials, components and technical language used during the making of the box-of-skills and Technical Drawing tools. This journal records first-hand the

				wide range of issues. Students should be building on knowledge from their Year 9 and GCSE studies. Students need to possess this knowledge before they embark on their NEA in Spring Term 3 as well as to ensure that they understand the application of this in real world situations.	activities, rationale of the materials and processes used, for example why is hardwood and plywood used in the T square? (alternatives discussed/evaluated and noted). It is an aid memoir and forms a valuable learning devise to familiarise Year 12 students with the requirements of the NEA, which they will begin in Spring 3.
12	3.2 Designing & Making Principles	Autumn 2	Wk 9	<ul> <li>Design processes:</li> <li>The use of a design process</li> <li>Investigations and analysis</li> <li>Using inspiration materials</li> <li>3.2.4 Design processes.</li> <li>The use of a design process.</li> <li>Students need to be aware of, and be able to discuss and implement, the stages of a range of design processes in order to apply personal judgment and relevant criteria in the appraisal of products and systems in readiness for their non-exam assessment and for their Designing &amp; Making Principles examination. Students will be building on prior knowledge from their KS3 and KS4 studies. This part of the course will be taught over 3 weeks in Autumn Term 2, in order to lead into students understanding the expectations of their NEA work.</li> </ul>	Box of skills: Bending lid, fitting lid, drilling lid. 3.1.2 Performance characteristics of materials - Performance characteristics of metals 3.1.4 Forming, redistribution and addition processes - Metal processes

This topic will enable students to discuss their own and commercial products, leading to possible improvements/</li> </ul>	Section A & B are taught in this order as they for the foundations of research and planning that students will build on the subsequent sections. Sections A-B are researching a design need then writing a design Brief and Specification using alive client, these sections will inform students designing in section C which will be taught next in the sequence. These sections will build on student's theory knowledge that they learn throughout KS3 and 4 studies as well as Year 12 to help them to design and make a product that solves a contextual problem set by the exam board. These topics and skills have been thoroughly taught

				modifications of the original idea. It is important we teach this here as it will underpin their NEA work, in ensuring students know how the use of third-party feedback and testing informs the evaluation process, which is ongoing during NEA, not just at the end.	throughout the KS3 and KS4 curriculum so will be familiar to students, Students will need to apply their knowledge and understanding and skills to a context set by the exam board which is different each year.
12	3.2 Designing & Making Principles	Spring 3	Wk 20	<ul> <li>Accuracy in design and manufacture:</li> <li>Using measuring and marking out equipment</li> <li>The importance of accuracy</li> <li>Testing and the elimination of errors</li> <li>Using measuring aids</li> <li>3.2.7 Accuracy in design and manufacture</li> <li>This topic is taught at this point in the course to support their NEA that is running alongside their theory studies. This topic will enable students to use a range of measuring and marking out equipment. They will understand the importance of accuracy in manufacturing, how testing can eliminate errors and the value of using measuring aids to ensure consistency of accuracy and the reduction of human error. Some of this content, students were introduced to during Year 8 and Year 9, this was later built upon in their KS4 studies. Students will be examined in this area on their Designing and Making principles exam.</li> </ul>	
12	3.2 Designing & Making Principles	Spring 3	21	<ul> <li>Design for manufacturing and project management:</li> <li>Planning for accuracy and efficiency</li> <li>Quality assurance</li> <li>Project management systems</li> <li>Critical path analysis</li> <li>Quality control</li> <li>Non-destructive testing</li> <li>Monitoring, checking and testing throughout production</li> </ul>	

				<ul> <li>3.2.9 Design for manufacture and project management</li> <li>Planning for accuracy and efficiency</li> <li>Quality assurance</li> <li>Quality control</li> <li>This topic is taught at this point in the course to support their NEA that is running alongside their theory studies. This topic will enable students to understand the importance of planning for accuracy when making prototypes and quality control. Some of this content, students were introduced from the very beginning of KS3 and has been re-visited during each project. This knowledge was later built upon in their KS4 studies. Students will be examined in this area on their Designing and Making principles exam.</li> </ul>	
12	3.2 Designing & Making Principles	Spring 4	Wk 22	<ul> <li>Responsible design: <ul> <li>Environmental issues</li> <li>Conservation of energy and resources</li> <li>Circular economy</li> </ul> </li> <li>3.2.8 Responsible design <ul> <li>Environmental issues</li> <li>Conservation of energy and resources</li> </ul> </li> <li>This topic will enable students to understand the responsibility of designers and manufacturers to ensure products are made using sustainable materials and components and how to design products for minimum impact on the environment. It is important this topic is taught at this point in the course as it directly informs the NEA work they are also working on. This topic is taught at the beginning of Spring Term 3, as students can link that knowledge and apply a greater context to their understanding. Students have been introduced to this concept in their KS3 studies and will have studied it in greater denth</li> </ul>	Continuation of Section A & Section B

				at KS4. Students will be examined in this area on their Designing and Making principles exam.
12	3.2 Designing & Making Principles	Spring 4	Wk 23	<ul> <li>Selecting appropriate tools, techniques and processes:</li> <li>Selecting the correct tools and equipment</li> <li>Safe working practices in a workshop situation</li> <li>Maintaining safety in commercial manufacture</li> <li>Development of designs from single prototypes to mass produced products.</li> <li>Batch or mass manufacture and the effect on the manufacturing process.</li> <li>3.2.6 Selecting appropriate tools, equipment and processes</li> <li>It is imperative that students are confident in selecting appropriate tools, techniques and processes during their NEA. This is the justification for students being taught this theory element before they must apply this knowledge practically during their NEA. Students have much experience of this topic area as it was introduced to them at the very beginning of KS3. Students will have greater experience of applying this knowledge in their KS4 studies, when they undertook their NEA. Students will be examined in this area on their Designing and Making principles exam</li> </ul>
12	3.2 Designing & Making Principles	Spring 4	Wk 24	<ul> <li>National and international standards in product design:</li> <li>British Standards Institution</li> <li>International Standards Organisation</li> <li>Restrictions of Hazardous Substances directives</li> <li>Battery directive</li> <li>Polymer codes for identification and recycling</li> <li>Packaging directives</li> <li>WEEE directive</li> </ul>

				<ul> <li>The EC energy label</li> <li>Eco-labelling</li> <li>3.2.10 National and international standards in product design</li> <li>Students must understand the importance of national and international standards in product design. They should be able to apply this to their NEA work, which is the reason it is being taught at this point. Students should use this information in their research. Students will be familiar with some of the content from their KS4 studies and we build on that. Students will be examined in this area on their Designing and Making principles exam</li> </ul>	
12	3.1 Technical principles	Spring 4	25	<ul> <li>Digital design and manufacture:</li> <li>Computer aided design</li> <li>Advantages and disadvantages of CAD</li> <li>The use of CAD to develop and present ideas for products</li> <li>CAM processes</li> <li>Laser cutting</li> <li>Routing</li> <li>Milling</li> <li>Turning</li> <li>Plotter cutting</li> <li>Virtual modelling</li> <li>Computational fluid dynamics</li> <li>Finite element analysis</li> <li>Rapid prototyping processes</li> <li>Fused deposition modelling/3D printing</li> <li>Electronic data interchange</li> <li>EPOS</li> <li>Production, planning and control networking</li> <li>3.1.7 Digital design and manufacture - Computer aided design (CAD)</li> <li>Computer aided manufacture (CAM)</li> <li>Virtual modelling</li> <li>Rapid prototyping processes</li> </ul>	

				- Electronic data interchange	
				- Production, planning and control	
				(PPC) networking	
				It is important that students are	
				able to develop and present their	
				ideas for products and realise the	
				henefits additive processes such as	
				ranid prototyping have to them as	
				designers during their NFA. This is	
				the justification for students being	
				taught this theory element before	
				they must apply this knowledge	
				practically during their NEA.	
				Students have experience of this	
				topic area as it was introduced to	
				them at KS3. Students will have	
				greater experience of applying this	
				knowledge in their KS4 studies,	
				when they undertook their NEA.	
				Students will be examined in this	
				area on their Technical Principles	
				exam	
12	2 1	Spring A	26	Focused practical task:

				<ul> <li>Fused deposition modelling/3D</li> </ul>	
				printing	
				3.1.7 Digital design and	
				design (CAD)	
				Computer aided manufacture	
				- Banid prototyning processes	
				Take hotelyhing higterses	
				Students are introduced to a new	
				piece of software that will enable	
				them to quickly and easily 3D print	
				their developed designs, allowing	
				them to gain feedback and test	
				their work throughout their NEA.	
				They spend 2 weeks, working	
				intensively on this. They are taught	
				this in preparation for them	
				embarking on this stage of their	
				NEA.	
12	31	Spring 4	27	Focused practical task continued:	
12	3.1 Technical	Spring 4	27	Focused practical task continued: Tinker CAD.	

				<ul> <li>Computer aided design</li> <li>The use of CAD to develop and present ideas for products</li> <li>Rapid prototyping processes</li> <li>Fused deposition modelling/3D printing</li> <li>3.1.7 Digital design and manufacture - Computer aided design (CAD)</li> <li>Computer aided manufacture (CAM)</li> <li>Rapid prototyping processes</li> </ul>	
12	3.1 Technical principles	Summer 5	28	Materials and their applications: <ul> <li>Materials and applications</li> <li>Material properties</li> <li>Classification of materials</li> <li>Metals</li> <li>Woods</li> <li>Polymers</li> <li>Papers and boards</li> <li>Composites</li> <li>Smart materials</li> <li>Modern Materials</li> <li>Moterial disposal</li> </ul> 3.1.1 Materials and their applications <ul> <li>Classification of materials</li> </ul> We teach Materials and their applications <ul> <li>Classification of materials</li> </ul> We teach Materials and their applications at the start of Summer Term 5, as the ability to choose the best material for product manufacture is an essential skill that students must possess as designers and they must demonstrate they are able to do so during the Development of design proposals section of their NEA, which they commence this week. Students will be building on knowledge that they have acquired at KS3 and studied in greater depth at KS4. This topic of study will be assessed in their Technical Principles examination.	NEA Section C - Development of design proposal(s) – Students should explore a range of possible ideas linking to the contextual challenge they have selected. These design ideas should demonstrate flair and originality and students are encouraged to take risks with their designs. Students may wish to use a variety of techniques to communicate. Students will not be awarded for the quantity of design ideas but how well their ideas address the contextual challenge selected. Students are encouraged to be imaginative in their approach by experimenting with different ideas and possibilities that avoid design fixation. In the highest band students are expected to show some innovation by generating ideas that are different to the work of the majority of their peers or demonstrate new ways of improving existing solutions. Students will develop and refine design ideas. This may include, formal and informal 2D/3D drawing including CAD, systems and schematic diagrams, models and schedules. Students
12	3.1 Technical principles	Summer 5	29	<ul> <li>Materials and their applications:</li> <li>Methods for investigating and testing materials</li> <li>Practical workshop tests</li> </ul>	will develop at least one model, however marks will be awarded for the suitability of the model(s) and not the quantity produced. Students will also

				<ul> <li>Industrial tests</li> <li>Focused practical task: Students to carry out practical workshop tests and document the results with photographs in their write up.</li> <li>3.1.1 Materials and their applications         <ul> <li>Methods for investigating and testing materials</li> </ul> </li> <li>Students must be able to select the most appropriate material for a specific application and they should know how to perform workshop tests and understand how materials</li> </ul>	select suitable materials and components communicating their decisions throughout the development process. Students are encouraged to reflect on their developed ideas by looking at their requirements; including how their designs meet the design specification. Part of this work will then feed into the development of a manufacturing specification providing sufficient accurate information for third party manufacture, using a range of appropriate methods, such as measured drawings, control programs, circuit diagrams,
				are tested in industry. Students should show evidence in their NEA work that they have performed workshop tests and will be assessed on this topic in their Technical Principles examination	Section C is taught after students have completed both sections A & B where students will research a need and write a
12	3.1 Technical principles	Summer 5	30	<ul> <li>Performance characteristics of materials:</li> <li>Materials selection</li> <li>Stock forms</li> <li>Paper and boards</li> <li>Re-cap on woods</li> <li>Re-cap on metals</li> <li>Re-cap on polymers</li> <li>Re-cap on Biodegradable polymers</li> <li>3.1.2 Performance characteristics of materials</li> <li>Performance characteristics of papers and boards</li> <li>Performance characteristics of polymer based sheet and film</li> <li>Performance characteristics of woods</li> <li>Performance characteristics of metals</li> <li>Performance characteristics of polymer based sheet and film</li> <li>Performance characteristics of metals</li> <li>Performance characteristics of polymer based sheet and film</li> <li>Performance characteristics of woods</li> <li>Performance characteristics of metals</li> <li>Performance characteristics of solution in this topic as they have been taught the performance characterials since</li> </ul>	brief and specification so they understand what their clients' needs are. Sections C and D are where students design a solution to their identified problem and then develop their idea. These sections will build on student's theory knowledge that they learn throughout Year 10 and Year 12 to help them to design and make a product that solves a contextual problem set by the exam board. These designing and development skills have been thoroughly taught throughout the KS3 curriculum so will be familiar to students. Students will then progress onto section E where they make the product that they have designed.

				KS3 and studied it in greater detail during KS4. We teach students this topic at this point to ensure they are aware that materials selections significantly impact on the potential success of a manufactured product and that a great design may fail if the material properties are not suitable for the production line. This enables them to apply this knowledge into their Development of design proposals work in a timely manner. Students will also need to demonstrate their understanding of this topic in their Technical principles examination.
12	3.1 Technical	Summer 5	31	Performance characteristics of materials:
	principles			Composites
				Smart materials
				Modern materials
				3.1.2 Performance characteristics of materials - Composites - Smart materials - Modern materials Students should be familiar with this topic form their KS4 studies so this really should be a re-cap and reminder of the materials they could be considering in the Development of their design proposals section of their NEA. Students must be aware as new designers, that Modern materials will continue to evolve as technology advances, as they are developed through the intervention of new or improved processes. Students will need to demonstrate their understanding of this topic in their Technical principles examination.
12	3.1 Technical principles	Summer 5	32	<ul> <li>Enhancement of materials:</li> <li>Material enhancement</li> <li>Polymer enhancement re-cap</li> <li>Wood enhancement re-cap</li> <li>Metal enhancement <ul> <li>Re-cap work hardening</li> </ul> </li> </ul>

				Focused practical task:	
				Hardening and tempering a piece of	
				steel	
				3.1.3 Enhancement of materials	
				<ul> <li>Polymer enhancement</li> </ul>	
				- Wood enhancement	
				- Metal enhancement	
				Students need to have developed a	
				knowledge and understanding of	
				enhancement methods for	
				materials and their suitability for	
				specific applications and be able to	
				demonstrate this in their	
				Development of design proposals	
				NEA work that is running in parallel.	
				Students will be familiar with Wood	
				enhancement techniques but the	
				remaining areas of study are likely	
				to be new to them. Students will	
				need to demonstrate their	
				understanding of this topic in their	
				lechnical principles examination.

				- Designers and their work Students will be taught the final instalment of Design theory to complete their knowledge of design styles and designers and their work for their examination on Design and making principles. Students are taught this here to enable them time to complete this task over the Summer alongside their NEA task.	
13	3.1 Technical principles	Autumn 1	1	Continuation of Forming, redistribution and addition processes: Wasting processes: Turning Routing timber Milling timber Forming processes: Lamination Steam bending 3.1.4 Forming, redistribution and addition processes Wood processes Students should be more familiar with these processes form their studies at KS3 and GCSE. However, some will be completely new to them. Students need to be able to develop an understanding of all of the processes, as they will be tested on them in their Technical Principles examination. Students will also be applying this knowledge to their NEA work if it is relevant to their project.	Continuation of Section D NEA
13	3.1 Technical principles	Autumn 1	2	Continuation of Forming, redistribution and addition processes: • The use of adhesives and fixings: - Polyvinyl acetate - Contact adhesives - UV hardening adhesives - Solvent cement	

				3.1.4.5 The use of adhesives and fixings	
				Students should be more familiar with the use of adhesives and fixings from their studies at KS3 and GCSE. However, some will be completely new to them. Students need to be able to develop an understanding of all adhesives and fixings as they will need to apply that knowledge when manufacturing their prototype and, as they will be tested on them in their Technical Principles examination.	
13	3.1 Technical principles	Autumn 1	3	Continuation of Forming, redistribution and addition processes:	
				• Jigs and fixtures:	
				Sanding jigs	
				Router jigs	
				3.1.4.5 The use of adhesives and	
				† ixings	
				Watch demonstration on how to create a finger joint using a router jig and compare to joint made last term by hand.	
				Students should be more familiar with the use of jigs and fixtures from their studies at KS3 and GCSE. Students need to be able to develop an understanding of the use of jigs and fixtures as they will need to apply that knowledge when manufacturing their prototype and, as they will be tested on them in their Technical Principles	
				examination.	
13	3.1 Technical	Autumn 1	4	The use of finishes:	•
	principles			Materials and their applications	
				Paper and board finishing:	
				- Laminating	
				- Embossing	
				- Debossing	
				- Varnishing UV varnishing and	
				spot varnishing	

	Paper and board printing     processes:
	- Screen printing
	- Flexographic printing
	- Offset lithographic printing
	- Digital printing
	Polymer finishing already
	covered.
	Metal finishing:
	- Cellulose and acrylic paints
	- Electroplating
	- Dip coating
	- Powder coating
	- Varnishing
	- Sealants
	- Preservatives
	- Anodising
	- Cathodic protection
	Wood finishing:
	<ul> <li>Polyurethane varnish Acrylic varnish</li> </ul>
	- Water-based paints
	- Stains
	- Colour wash
	- Wax
	- Pressure treating
	- Yacht varnish
	- Danish oil
	- Teak oil
	Focused practical task: Test out a
	range of finishes. Label them and
	photograph.
	Dip coat a piece of metal and write
	up process with photographs.
	3.1.5 The use of finishes
	- Paper and board finishing
	- Paper and board printing
	- Polymer finishing
	- Metal finishing
	- Wood finishing
	Students should be more familiar
	with the use of finishes from their
	studies at KS3 and GCSE. However,
	them. Students need to be able to
	them. Students need to be able to

				develop an understanding of all the	
				finishes on the specification as they	
				will need to apply that knowledge	
				prototype and as they will be	
				tested on them in their Technical	
				Principles examination.	
13	3.1 Technical	Autumn 1	5	Modern and industrial scales of practice:	
	principles			P. 200001	
				Scales of production:	
				- One-off, bespoke production	
				- Batch production	
				- Mass/line production	
				- Unit production systems	
				- Quick response manufacturing	
				- Vertical in-house production	
				• Efficient use of materials:	
				- Materials cost, form,	
				manufacturing processes and	
				scale of production	
				<ul> <li>Design and the economic use of materials</li> </ul>	
				- Manufacturing processes which	
				increase accuracy and reduce	
				waste	
				production	
				3.1.6 Modern industrial and	
				commercial practice	
				- Scales of production	
				3.1.6.2 Efficient use of materials	
				Students should be familiar with	
				these topics from their studies from	
				their basic understanding	
				throughout KS3 and more detailed	
				study at GCSE. Students need to be	
				modern and industrial scales of	
				practice as they should be able to	
				refer to it in their NEA and will be	
				tested on them in their Technical	
				Principles examination. This topic is	
				end of Autumn Term 1.	
13	3.1	Autumn 1	6	Modern and industrial scales of	
	Technical			practice:	
	principles			• The use of computer systems	
				Computer systems for planning	

				and control	
				<ul> <li>Computer systems for manufacturing and production:</li> <li>Modular/cell production</li> <li>JiT manufacture</li> <li>Quick response manufacturing</li> <li>Flexible manufacturing systems</li> <li>Computer systems for production, distribution and storage</li> <li>Standardised and bought-in components:</li> <li>Standardised components</li> <li>Bought-in components</li> <li>Changing standards</li> <li>Sub-assembly</li> <li>3.1.6 Modern industrial and commercial practice</li> <li>3.1.6.2 Efficient use of materials</li> <li>The use of computer systems</li> <li>Sub-assembly</li> </ul>	
13	3.1 Technical principles	Autumn 1	7	<ul> <li>Health and Safety:</li> <li>Safe working practices: <ul> <li>Training</li> <li>Machine maintenance and guarding</li> <li>Extraction systems</li> <li>Provision of personal protective equipment</li> <li>Accident reporting</li> <li>Health and Safety at work Act (1974)</li> <li>Control of Substances Hazardous to Health regulations</li> <li>Health and safety in product manufacture</li> <li>Safe working practices in the school or college workshop and in industry</li> <li>Safety precautions</li> <li>Risk assessment</li> <li>Safety in product and services to the customer</li> <li>Legislation to protect consumers</li> <li>Consumer Protection Act 1987</li> <li>The Trade Descriptions Act 1968</li> </ul> </li> </ul>	

				<ul> <li>The British Standards Institute</li> <li>The safety of toys</li> <li>3.1.9 Health and safety <ul> <li>Safe working practices</li> <li>Safety in products and services to the customer</li> </ul> </li> <li>Students will possess sound knowledge of workshop health and safety procedures from their practical experience at KS4 and from their GCSE studies, but are likely</li> <li>to have limited knowledge of safety in industry or legislation. Students need to be able to develop an understanding of all topics under health and safety as they should be able to refer to it in their NEA and</li> </ul>	
				will be tested on it in their Technical	
				taught at the end of Autumn Term	
				1.	
13	3.1 Technical	Autumn 2	Wk8	Protecting designs and intellectual property:	Continuation of Section D NEA
	principles			<ul> <li>Intellectual property (IP)</li> </ul>	
				<ul> <li>Copyright and design rights</li> </ul>	
				Patents	
				Registered designs	
				Trademarks and logos	
				Open design	
				3.1.10 Protecting designs and intellectual property	
				Students must develop a knowledge and understanding of the importance of protecting designs and intellectual property as potential designers of the future. Students will be examined on this area in their Technical Principles examination.	

13	3.1 Technical principles	Autumn 2	Wk9	<ul> <li>Feasibility studies:</li> <li>Computer modelling in production planning</li> <li>Feasibility studies and costings</li> <li>Feasibility modelling in design</li> <li>Testing prototypes</li> <li>3.1.12 Feasibility studies</li> <li>Students must develop a knowledge and understanding of the use of feasibility studies in the design process and in industrial contexts to assess practically for production of proposed designs, including the testing of prototypes with potential consumers. Students will be able to apply this knowledge to their NEA project and examined on this area in their Technical Principles examination.</li> </ul>	
13	3.1 Technical principles	Autumn 2	Wk11	<ul> <li>Enterprise and marketing in the development of products:</li> <li>Customer identification</li> <li>Corporate identity</li> <li>Packaging design</li> <li>Labelling</li> <li>Global marketing</li> <li>Advertising and promotion</li> <li>Product costing, calculation and profit</li> <li>Entrepreneurs and collaborative working with designers</li> <li>3.1.13 Enterprise and marketing in the development of products</li> <li>Students must develop a knowledge and understanding of how designers work with entrepreneurs, and sales and marketing teams, and use research and customer information to develop products and packaging. Students will have a limited knowledge of this topic unless they studied Business at</li> </ul>	

			this area in their Technical Principles examination
			Principles examination.
13		Wk12	Mathematical skills for the written
			exams:
			Number and percentages
			<ul> <li>Material use and production costs</li> </ul>
			Volume
			• Tolerance
			Ratios
			Mixing constituent parts
			Dividing sides
			The majority of students taking our subject study Maths or further
			Maths at A Level and therefore
			either already know or are able to
			pick up the Maths Involved for their external exams very quickly
			Students who are not familiar with
			the Maths skills required, have the
			time to focus on this and spend
			time with their teacher during
			area, whilst the remainder of the
			class can work independently on
			this or studying for their Technical
			Principles and Designing and Making Principles exams
13		Wk13	Mathematical skills for the written
			exams:
			<ul> <li>Volumes of standard geometric forms</li> </ul>
			Combining forms
			<ul> <li>Comparing weights using</li> </ul>
			density
			Area and volume scale factors
			Co-ordinates and geometry
			Statistics and probability
13		Wk14	
			All theory covered at this point.
			Students will complete additional
			exam practice questions and have
			revision sessions, from this point
			forwards, in preparation
			for their external exams.

13		Wk15	Revision and preparation for	
			Internal and external examinations.	
13	Spring 3	Wk15 Wk16	Revision and preparation for Internal and external examinations. Revision and preparation for Internal and external examinations.	NEA Section E-Analysing and Evaluating-Within this iterative design process students are expected to continuously analyse and evaluate their work, using their decisions to improve outcomes. This should include defining requirements, analysing the design brief and specifications along with the testing and evaluating of ideas produced during the generation and development stages. Their final 
				well as the practical experiences of KS5. Students will then evaluate their product with their client and suggest further modifications which could be made to the product to improve its suitability. These skills taught in the NEA are all transferable to a wide range of HE and FE qualifications and general life
				skills, where students would need to utilise ICT facilities, problem solving, interpersonal skills, research gather and analysis, costing and budgeting and self-evaluation skills to realise a solution to a problem.
13	Spring 4		Revision and preparation for Internal and external examinations.	

In addition to end of unit assessment, students will frequently carry out knowledge check short tests in class and in class and at home, create summaries and key terms glossaries to embed terms and concepts into their long-term memory.

They will have frequent practice on exam type questions which range from multiple choice to 9 and 12 mark questions which test all of the assessment objectives.

#### **Internal Assessments:**

Students are assessed at the end of each unit. This assessment is in the format of past examination questions that are tracked for each student and collated to provide an ongoing summary of progress for each student

#### **Final External Assessment:**

# Paper 1:

### What's assessed

• Technical principles

### How it's assessed

- Written exam: 2 hours and 30 Minutes
- 120 marks
- 30 % of A-Level

### Questions

A mixture of short answer and extended response questions.

# Paper 2:

#### What's assessed

Designing and Making Principles

#### How it's assessed

- Written exam: 1 hours and 30 Minutes
- 80 marks
- 20 % of A-Level

#### Questions

A mixture of short answer and extended response questions. Section A:

#### Section A:

- Product Analysis: 30 marks
- Up to 6 short answer questions based on visual stimulus of product(s).

#### Section B:

- Commercial manufacture: 50 marks
- Mixture of short and extended response questions

# NEA

### What's assessed

• Practical application of technical principles, designing and making principles.

### How it's assessed

- Substantial Design and make Final External Assessment:
- 100 marks
- 50% of A-Level

Substantial design and make task.

- Assessment criteria:
  - Identifying and investigating design possibilities
  - Producing a design brief and specification
  - o Development of design proposals
  - Developing design Prototypes
  - Analysing & evaluating
- Students will produce a prototype and a portfolio of evidence
- Work will be marked by teachers and moderated by AQA

#### **Further Curriculum Support**
