

AQA A level Mathematics

Sally Smyth
Head of Mathematics

Course Overview

All content is compulsory, there are no choices in modules. This is the same across all exam boards. 5 period per week, 2 teachers: both teach Pure and then either Mech or Stats.

Pure	Mechanics	Statistics
A: Proof B: Algebra and functions C: Coordinate geometry D: Sequences and series E: Trigonometry F: Exponentials and logarithms G: Differentiation H: Integration I: Numerical methods	J: Vectors P: Quantities and units in mechanics Q: Kinematics R: Forces and Newton's laws S: Moments	K: Statistical sampling L: Data presentation and Interpretation M: Probability N: Statistical distributions O: Statistical hypothesis testing

What is Pure Mathematics?

Methods and techniques which underpin the study of all other areas of mathematics, such as, proof, algebra, trigonometry, calculus, and vectors ... **enabling us to solve real world problems.**

What is the least amount of metal you need to make a cylindrical can that holds 330ml of fizzy drink?

What is Statistics?

Reaching conclusions from data in order to make informed decisions to help plan for the future.

What is the probability of two '100 year floods' happening within the space of 5 years?

What assumptions have you made?

What is Mechanics?

The modelling of the world around us, the motion of objects and the forces acting on them.

A golfer drives their ball from a tee on horizontal ground so that it has an initial velocity of 50ms^{-1} at an angle of 40 degrees above the horizontal.

How far down the fairway will the ball land?

Particularly useful for careers in physics or engineering

Year 12

No External Exams

June Y13

3 papers each 2 hours

Paper 1 – Pure only

Paper 2 – Pure and Mechanics

Paper 3 – Pure and Statistics

All assessments are formal written exams at the end of year 13. Calculators are required for each paper and the graphical calculator gives candidates a strong advantage therefore we encourage all students to purchase this through school early in year 12. Approximate cost £90. Financial support available, if needed.

Most of the marks are for steps in working rather than answers, so students must show their workings in a clear, rigorous and logical way.

Any of pure content can be assessed in any of the 3 papers, it is not divided by topic between the papers. All mechanics is assessed in paper 2 and the statistics content is assessed in paper 3.

Why study Mathematics?

Develop key employability skills

e.g. problem-solving, communication, logical reasoning and resilience

Leads to versatile qualifications

well-respected by employers and higher education

Increase knowledge and understanding of mathematical techniques and their applications

Support the study of other A levels

Stimulating and challenging courses

Excellent preparation for a wide range of university courses

Activate Windows
Go to Settings to activate Windows.

What are the career opportunities?

Maths in other A levels

	Geography	(no specific percentage but geographical skills include quantitative and qualitative skills equally)
	Economics	(at least 20%)
	Biology	(at least 10%)
	Business	(at least 10%)
	Psychology	(at least 10%)
	PE	(at least 5%)
	Sociology	(no specific percentage but you will be analysing data)

AQA Further Maths

If you opt for “Further Maths” it only takes one option block but includes A levels in both Maths and Further Maths. It is TWO full A levels.

- You will have 8 Maths lessons a week, split between 2 teachers: one will teach all the Pure and the other teacher will focus on Mech and Stats.
- At the end of Year 12 you will have 2 external exams for Further Maths at AS. You can choose to swap to A level Maths only at the end of Year 12 having completed the AS in Further Maths.
- In Year 13 you will continue with 8 lessons and will have 6 external exam papers at the end of the year. Leading to an A Level in Maths and a separate A Level in Further Maths.

A Level Further Maths Topics

Pure

- Proof
- Complex Numbers
- Matrices
- Further Algebra & Functions
- Further Calculus
- Further Vectors
- Polar Coordinates
- Hyperbolic Functions
- Differential Equations
- Numerical Methods

Mechanics

- Dimensional Analysis
- Momentum & Collisions
- Work, Energy & Power
- Circular Motion
- Centres of Mass & Moments

Statistics

- Discrete Random Variables
- Poisson Distribution
- Type 1 and Type 11 errors
- Continuous Random Variables
- Chi Squared Test for Association
- Exponential Distribution
- Inference-One Sample t Distribution
- Confidence Intervals
